

Advanced Sapphire Chill tip handpiece provides continuous contact cooling of the epidermis, which ensures patient safety and comfort

4. Immediately after the treatment there is mild redness and swelling which resolve within a couple of hours. It is advised to avoid unnecessary sun exposure and to use a good sunscreen for few days following any laser treatment
5. Hair re-growth may occur more quickly in area known to produce hair rapidly (chin and cheeks) than in the areas typically associated with slower hair growth (chest and back). Patients usually report that the hair re-growth is slower, finer in texture and sparser after each treatment.
6. Although existing laser research indicates that laser treatment is a fantastic and effective method to remove hair, there is no guarantee that it will be able to eliminate your unwanted hair completely and permanently.
7. The treating doctor may use other assistants (nurses /doctors/technical persons) for the present as well as follow up treatments. Also the next treatment may not necessarily be done by the same person and he/she has my consent to do so.
8. The treatment is not advisable in the following situations:
 - If the patient is on drugs which increase sensitivity to light
 - Cancerous and/or precancerous lesions in the treatment area.
 - Active herpes simplex if treating the area around the mouth.

Laser Hair Reduction services at Indus Hygiea

1. At Indus Hygiea Hospital, our main priorities are your safety, health and results.
2. All the laser treatments are done by a team of world class Dermatologist Cosmetologists & Laser Expert only.
3. Laser Hair Reduction treatment are performed by using state-of-the-art LightSheer™ Diode laser from M/s Lumenis Ltd., (World Leaders in Medical Laser).
4. Your hair removal will be done by the new 'state of the art' DIODE laser (LUMENIS-LIGHT SHEER, 800 nm)
5. You would require between 3-8 sittings for optimum results (80% hair reduction). There are many factors which affect the effectiveness of the laser.
6. Touch up" sessions are sometimes required to maintain reduction.
7. Each laser hair removal session will be spaced at 4-8 weeks according to your doctor's decision.
8. The doctor may require some tests before starting treatment for laser hair removal like ultrasound and hormonal blood assays.
9. Avoid threading / bleaching / waxing / plucking of hair 3 weeks before each session.
10. Treatment time varies form 15 min to upto 2 hours depending on area to be treated. For example the full face may require up to 30 minutes.
11. The treatment will be quite painless. It may feel like a rubber band hitting the skin. A cooling gel may be used during the procedure.
12. After the treatment, mild redness may be noticed as well as feeling of warmth. The recovery is fast and you can return to all normal activity the same day. You may be given ice packs after the procedure for cooling the area.
13. The precaution to take is to avoid excessive. Direct sun exposure for at least 3 days after laser and use sun screen through the day.
14. Rarely, a little pigmentation may be noticed in lasered area.
15. In a few cases, an initial increase in thickness and growth of hair may be noticed. At lower energies which resolves with further treatment.
16. The reduction is gradual and a permanent hair reduction will be achieved.
17. Follow your doctor's advice and carefully under stand your prescription each treatment.
18. Photographic records may be taken to assess your progress as treatment continues.
